Review of NIS-22, Section 64, Manufacturing and Construction,
 Rumania

1. Subject Section was reviewed by GG/E as per your request. We have no comments or suggestions regarding the substantive content other than those discussed with you on 14 December 1960.

2. A detailed check was made of place name spellings and a spot check was made of the geographical coordinates with those given in the NIS Gazetteer for Rumania. Errors in spelling and locations were corrected on the manuscript; the number of errors in geographical coordinates would warrant a detailed check of all the coordinates given. Where there are several settlements with the identical name, it is suggested that the author of the section be consulted to establish the correct location. Errors of location and spelling on the accompanying maps were corrected and the corrections discussed with D/GC.

3. Under part J, Chemical, it is suggested that Iasi (47°10'N-27°36'E), the location of Antibiotics Plant No. 10 that produces penicillin, streptomycin, ointments, and other similar products, be included in the text and on the appropriate map under pharmaceuticals.
